

# 6 Tips for Healthy Aging

As you age, use these 6 tips to improve your health and prevent chronic disease.

**1**

## Eat Healthy

Make healthy choices—like fruits, vegetables, whole grains, lean meats, and low-fat dairy products.

**2**

## Get Regular Physical Activity

Being active can help you prevent, delay, and manage chronic diseases; improve balance and stamina; reduce risk of falls; and improve brain health.

**3**

## Quit Smoking

Take the first step and call 1-800-QUIT-NOW for FREE support.

**4**

## Get Regular Checkups

Visit your doctor for preventive services, not just when you're sick. This can prevent disease or find it early, when treatment is more effective.

**5**

## Know Your Family History

Share your family health history with your doctor, who can help you take steps to prevent chronic diseases or catch them early.

**6**

## Be Aware of Changes in Brain Health

Everyone's brain changes as they age, but dementia is not a normal part of aging. See your doctor if you have questions about memory or brain health.
